

Joint activities > RIXG > RPV > RPV workplan

Priorities as agreed by Management Group.

This page can be edited by Neil Turner, Rob Worth, website admins.

Item	Story	Date Due				
1	Stats – in progress	19/6/09				
2	<p>Complete 'Unit results combined' – with colour coding or other way of differentiating. Refinement as discussed based on new and previous: Your record has received data from (dates for each or just for 'last' as below?) <i>This could be on landing page, see item 4. Or it could link to a list of dates when info received.</i></p> <table border="1" data-bbox="268 719 1203 757"> <tr> <td>York (base unit)</td> <td>Leeds</td> <td>UK Transplant</td> <td>You (patient)</td> </tr> </table> <p>Last data received 12.03.2008 0540h from York</p> <p><i>Base unit is determined by the origin of the login that the patient is using. It sets which unit's contact info, demographic info and 'problem list' ('other diagnoses') is used. Drugs are shown from both units with origin identified.</i></p>	York (base unit)	Leeds	UK Transplant	You (patient)	3/7/09
York (base unit)	Leeds	UK Transplant	You (patient)			
3	<p>Minor –</p> <ol style="list-style-type: none"> 1. Improve formatting in Letters (paragraphs not working) 2. Info about Results panels on hover over '1', '2' etc – to list the tests or test types. Change > to 'more results' in bold or make more obvious similar label. 3. Improve system for contacting unit/system admins to be a form linked from the top of the Contacts page rather than the bottom <i>[because webmail users not able to use existing links]</i>. Make a clear extra field in Contact info for unit admins to populate a specific 'RPV enquiries email address'. Some explanatory text required to explain to user which destination is appropriate, e.g.: <ul style="list-style-type: none"> Local unit admin – any queries about results not appearing or being wrong, or about diagnosis or contact details. These all need to be corrected in your local unit's electronic records. Non-urgent changes can be notified at your next visit. RPV System Administrators – if you want to make any comments about the system as a whole, or the information links suggested. 4. Add link 'forgotten login/password' under the login box (see <i>APPENDIX, page 5</i>) 5. Fix text overlaps on heading in some screens in Firefox: the two info screens, results. 6. <i>Move all links under 'Medical Info' to a separate heading under Patient Info (now to be called just Info) below Further Info – call it "Further medical information"</i> 7. <i>?Javascript or similar to do checksum on final digit of NHS number when registering a new patient and bring up alert 'This is not a valid NHS number. Are you sure it is correct?' We have established that the checksum method is identical in England, Scotland and Northern Ireland.</i> 	10/7/09				
4	<p>Security suite and login screen –</p> <p>A login lands you on a once-only landing screen/page (<i>not pop-up</i>) that includes</p> <ol style="list-style-type: none"> 1. message saying something like 'go away if you aren't entitled to read this record'. 2. info about last login, and when/where data received from – "Your record last received data on from" 3. <i>advice on safe passwords</i>, e.g. along the lines of the stuff for staff users at http://www.renal.org/rixg/adminhelp.html#Anchor-14210 4. <i>You have a login from [Unit A] and a login from [Unit B]. Use the one that is your regular unit so that your details will be correct.</i> 5. <i>We have this email address for you: xxxxx@yyy Click here if you need to change this. (Item 9)</i> 6. <i>? javascript indicator of password strength - perhaps</i> <p>B limit number of consecutive failed login attempts without putting large burden on Admins; initially, limit to 15 <i>before a lockout for that username requiring local admin intervention.</i></p>	24/7/09				
5	<p>Patient enters data –</p> <ol style="list-style-type: none"> 1. Blood pressure (as example of numerical data from a new source). [Note: no intention to return this data to unit datasystem] <i>See Appendix. Colour coding for patient-entered data.</i> 2. Comment – blog linked to dates by symbol at R of results tables 3. <i>'About me' page - info about me, profile ... questions I'd like answered - based e.g. on care plan</i> 	14/8/09				

	<i>We discussed how to present some of the 'Interaction' issues in 5 and 6, may need to look further when these are made.</i>	
5a	Anonymous feedback to unit about performance (a letterbox with anonymous messages <i>that will be received by</i> unit admin). <i>Again we need to discuss presentation and explanation of this.</i>	21/8/09
6	Discussion board – private to view, with login identical to RPV login but username concealed (in future – ?profile for patient ... how you want name to show ... photo ... a few lines of bio that others could read etc	4/9/09
7	Quality checks – unit admins have some kind of listing or messaging of failed file reading, and other issues as discussed, <i>including;</i> <ul style="list-style-type: none"> · <i>Cessation of file transfer – if no files from a unit for 36h.</i> · <i>Valid dates – e.g. future dates are not permitted for tests (but OK for drugs)</i> · <i>Testcodes sent that aren't defined in schema</i> · <i>Invalid XML</i> · <i>Failed decryption/load</i> · <i>Server unavailability</i> 	18/9/09
8	Graphics – users can generate a graph of any two data items versus time. Default time 1y, default range max to min, but with the ability to alter both, including to future time periods so that there is a large blank section on the right hand end of the graph – helpful in predicting timecourse of deterioration of kidney function. <i>Consider using tools at www.amcharts.com</i>	2/10/09
9	Collect user emails and improve ability to communicate electronically – on the one-off landing page after login, ask patient to check email address shown for them and tell them how to confirm/change it. Include a box 'We would like to contact you occasionally by email with information about Renal PatientView. We will never include confidential information in emails and we will never pass on this address to anyone else apart from your renal unit. Please only check this box if you do not want us to contact you in this way'. I do not want to receive occasional emails from Renal PatientView Accept change <i>in email address</i> only after they click on a link in an automatically sent email. Store 'verified when' next to email addresses. The verification email 'How to get help from Renal PatientView' should be addressed to them by name and include a summary of how to email their unit's RPV admin – this will enable them to access that info when they've forgotten their login as well as simplifying data alterations. It should therefore end ... "Keep this message safely so that you have these contact details if you forget your login." Should also permit a unit admin or superadmin to extract emails, with option to email them outwith or message them directly from the system. (Individual messages on login not in remit of current story?)	16/10/09

10	Printed output – A method of generating a printable file that includes all recent info and a summary of info links that are available on diagnosis, treatment, etc. This html file will also be usable by others, e.g. HealthSpace. <i>Last 5 items under each table heading</i> <i>Position promoted - Rob – following June meeting we'd like to add this to the timetable now.</i>																	
11	Reconcile multiple NHS/CHI etc numbers – A method to permit creation of unitary record for patient with NHS and CHI and HCN number (NI; Eilish Meehan's info), or any combination (not intended to reconcile two numbers in a single domain, eg two CHI numbers, but I guess it could). Need to discuss safety issues around operation.																	
12	Occasional tests – a screen to present 'occasional' tests that aren't suitable for table. Sent in a manner similar to Letters; test result is lightly formatted text. Define tags soon for suppliers. <i>This section EITHER to be under a new tab released by deleting medical info (ot sure how to label it), OR it appears as a subpage under Results – this might be better.</i> <i>Source may be colour coded rather than listed in table below.</i> [specialtest] date + time testname (should be free text just now but allow for poss of codes in future; testcode?) testtext <table border="1" data-bbox="263 1680 997 1792"> <thead> <tr> <th>Date</th> <th>Test</th> <th>Source</th> </tr> </thead> <tbody> <tr> <td>26 09 2008</td> <td>HCV copies</td> <td>Bristol</td> </tr> <tr> <td>20 09 2008</td> <td>ANCA</td> <td>Truro</td> </tr> </tbody> </table> Examples; clicking on Test takes you to ... <table border="1" data-bbox="263 1825 997 1870"> <tbody> <tr> <td>20 09 2008</td> <td>ANCA</td> <td>Truro</td> </tr> </tbody> </table> <table data-bbox="263 1881 997 2016"> <tbody> <tr> <td>ANCA immunoassay</td> </tr> <tr> <td>26.9.8</td> </tr> <tr> <td>Anti-MPO 7 (0-10)</td> </tr> <tr> <td>Anti-Pr3 23 (1-12)</td> </tr> </tbody> </table> Back to special tests	Date	Test	Source	26 09 2008	HCV copies	Bristol	20 09 2008	ANCA	Truro	20 09 2008	ANCA	Truro	ANCA immunoassay	26.9.8	Anti-MPO 7 (0-10)	Anti-Pr3 23 (1-12)	30/10/09 (<i>will need revision – items inserted above</i>)
Date	Test	Source																
26 09 2008	HCV copies	Bristol																
20 09 2008	ANCA	Truro																
20 09 2008	ANCA	Truro																
ANCA immunoassay																		
26.9.8																		
Anti-MPO 7 (0-10)																		
Anti-Pr3 23 (1-12)																		

Possible further developments

?12	<i>Upload pdf files – repository for files where format matters. Needs further discussion – how do they get there. Examples: Care plan For further discussion.</i>	
?	Page by page analysis of usage – Analysis of page usage as well as logins.	
?	Comorbid conditions – Other Conditions are coded in an analagous manner to primary diagnosis and linked to appropriate info links. Possibility of providing each with up to 3 information links (patient info only)	
?	Open source – Code is published in an appropriate place for others to share. It would be possible to adapt RPV to be a primary healthcare record in a simple healthcare environment.	
?	Admin emails – Superadmin can alter address to which admin@renalpatientview emails go
